

Proud to have delivered

NHS Nightingale Hospitals through the P22 Framework

Collaboration is key in the fight against COVID-19. In April 2020 the NHS, Department of Health & Social Care, Ministry of Defence, ProCure22 and other partners, came together to deliver the new NHS Nightingale Hospitals.

The hospitals provided an incredible increase in critical care capacity across England to ensure the NHS had the beds to care for COVID-19 patients. Central to this effort were the P22 Principal Supply Chain Partner contractor organisations coming together under the DHSC ProCure22 Framework to deliver four new hospitals in little more than a fortnight. This increased critical care bed capacity by 50% at a crucial time in the NHS's response to COVID-19. The fast facts shared here show what was involved in this remarkable achievement, from the three-day period between the first phone call to site work starting, to delivering four new hospitals handed over to local NHS Trusts within a 17-day period.

Across four Nightingale sites - Manchester, Birmingham, Bristol and Harrogate - we delivered...

2500 MEMBERS OF STAFF

worked across all four sites
= nearly 250,000 hours

234KM OF POWER AND DATA CABLES

The approx. distance between Birmingham and Harrogate

INSTALLED 33KM

of Medical Gas Pipe = The sea gap between England and France at the Strait of Dover

2239 BEDS

in 17 days across all sites
= 11 minutes per bed

BUILT 29KM

Walls and Partitions = similar to the length of the circle line on the London Underground

121,900M²

of flooring installed = the equivalent of an acute city hospital floor area

"The six Principal Supply Chain Partners worked together to deliver over 2,200 inpatient beds within 17 days, a feat never achieved before within the NHS. Seamlessly working through a joint Project Management Office, they co-ordinated the programme ensuring the beds were available for a potential Easter surge in COVID-19 cases."
